EVERGREEN LINE

WORLDWIDE REEFER SERVICE

Leaders in the Transport of Temperature-Controlled Cargo

PurFresh®

Evergreen Line moves temperature-controlled cargo throughout the world using some of the most modern solutions available. PurFresh®, a leader in transportation solutions for perishables, provides a global service network and a continuous loop of shipping point processes, in-transit protection and destination confirmation to provide shippers, receivers and retailers with the expertise, systems and feedback to ensure the best possible atmosphere performance and to maximize perishables' profit potential,

PurFresh® is the world leader in modified and controlled atmosphere transportation for the perishable products industry that:

- Maintains post-harvest quality and reduces decay-related losses
- Controls surface and airborne microorganisms
- Controls mold by shutting down sporulation
- Increases storage and shelf life
- Consumes and regulates ethylene
- Supports directives to reduce chemical residues
- Reduces/eliminates the need for fungicides/fumigants
- Disinfects container surfaces
- Enhances food safety
- USDA and FDA approved and USDA certified for organic produce
- Tracks O3, CO2, O2, temperature, relative humidity and location
- Comprehensive reporting
- Available on-trip load monitoring

MAXTEND®

Maxtend® sets the benchmark for controlled atmosphere solutions for safe transportation of perishable waterborne cargo using standard reefer containers. Evergreen Line offers this market-leading technology, worldwide coverage and reliability in providing a tailored atmosphere control system that provides optimum results.

Maxtend's 'One-Trip' system and global management and support network gives maximum flexibility and can be fitted to any standard reefer container with any refrigeration system quickly and efficiently, without the need for permanent modification. This eliminates the need to maintain a dedicated controlled atmosphere container fleet.

Maxtend® slows respiration and places produce in a state similar to 'suspended animation', effectively retaining quality and increasing storage life. It also:

- Tailors atmospheres to maximize produce life well beyond standard air storage methods.
- Results in minimizing moisture loss resulting in produce arriving in peak freshness.
- Helps satisfy the worldwide demand for organic produce with a system that also suits every budget.

Vessels are open for booking through Evergreen's industry leading customer service centers or via our E-Commerce site located at:

www.shipmentlink.com.

EVERGREEN'S REEFER SERVICE

Evergreen Line offers temperature-controlled container capability to all parts of the world utilizing diversified state-of-the-art technologies. With 2,000 newly built Carrier-brand units (40' HC Reefer with 69NT40-561-201) joining the reefer fleet in April and May of 2014, the average age of Evergreen's reefer equipment is 5.5 years. This ensures its competitive edge compared to other shipping lines.

When it comes to perishables, minutes matter so of utmost importance are the microprocessor controls for monitoring the units for errors. Maintaining the integrity of the product through the entire intermodal voyage requires two refrigerated systems and data loggers that continuously monitor and control temperatures.

Whether the needs are for fresh, chilled or frozen, the benefits are significant. Evergreen's customers at both ends of the trade can depend on perishables reaching market in ideal condition at the peak of freshness.

From Pacific Northwest seafood to Midwest beef to Washington apples to California grapes—and every fresh, chilled or frozen commodity in between—all cargo is protected from booking through each step of the transportation process by Evergreen's enhanced reefer services and the knowledgeable Evergreen people in charge.
